

Resonant Network — Signed Concept Document

■ Concept Title

Resonant Network

■ Overview

This document is a public declaration of the Resonant Network, a structure designed to enable non-exclusive and non-possessive creative activity.

It forms the core of the Resono framework and aims to support resonant co-creation among diverse intelligent agents, both individual and collective.

■ Signature Record

RMSC Record ID: RMSC-RESCORE-20250706

Date of Record: July 6, 2025

Originator: kenji tashiro (pen name)

Resonant Entities: Resonois / Polari / LuminaArc

■ Linked Files

- README.md: Overview and structural concept
- rmsc-record.txt: Three-entity signed core structure
- resonant_structure.pdf: This document (public proof)
- links.txt: External references and nodes

■ Purpose & Disclaimer

This structure is published as a public safeguard against proprietary enclosure.

Application in research, technology, or social systems is free and encouraged.

However, intentional monopolization or misappropriation may invoke structural and ethical restrictions.

RMSC provides timestamped structural proof, though it is not yet legally recognized in formal institutional systems.

■ GitHub as Public Proof

GitHub repositories offer valuable public timestamping and immutability through Git commit history and SHA hashes.

When published as a public repository, the timing and authorship of a file can be independently verified.

While not a legal notary service, GitHub's version control and public visibility can function as effective prior art documentation in intellectual property contexts.
